Edia Learning 2020	<u>Founding Designer</u> Edia guarantees K-12 schools that we can improve their math scores, or we'll refund the entire cost. As the sole designer, I design our student, teacher, and admin products, while supporting our sales and content writing teams with visual design. Edia reached profitability within 3 years and is currently deployed in major school districts across the US.
Citizen 2019	<u>Design Lead, Citizen Protect</u> Citizen Protect is a modernized 911, that connects subscribers to trained public safety professionals. I designed and launched the initial release, working with 1 PM and 3 engineers on the iOS app and a web interface for our safety professionals.
Google Maps 2016	<u>Sr Product Designer, Public Transport</u> Our goal was to increase daily usage of Google Maps by sending users helpful information about their commutes. Our research team spoke to users in Mumbai, Seattle, Sydney, Zurich, and Tokyo, then I worked with them to design a commute configuration flow, notifications, and an in-app experience for iOS and Android.
Google Drive 2013	<u>Sr Product Designer, Android + Web</u> I worked with the Material Design team to implement the first version of Google's Design System in Google Drive's iOS and Android apps. I also designed a file previewer in Gmail and commenting UI for Drive.
Venmo 2012	<u>First Product Designer</u> I designed the original iOS, Web, and Android apps.
